Correct answers:

1) So, have you ever **wondered** who actually **invented** the Internet?

2) Or **was** it thanks to a myriad of smart scientists **working** on something they **knew was** useful but **didn't realize** would be so big?

3) One popular but wrong story **is** that the internet **was developed** by the USA so they **had** a communication network that would survive a nuclear war.

4) With time-sharing, these behemoths could **process** several tasks at a time, which **meant** their power could be used by several scientists at once.

5) And, obviously, once you **start connecting** computers together you **start** to wonder about what you **need** to do to make communications between them easier.

6) The French also **played** a role. They **were working** on a scientific network called CYCLADES, but they **didn't have** a big budget, so they **decided** to work on direct connections between computers, as opposed to working with gateway computers.

7) The TCP/IP protocols **form** the basic communication language of the internet, which **labels** the packets of data and **makes** sure that even though some pieces of the same data **take** a different route, they all **arrive** at their destination and can be reassembled.

8) Networks really **began** communicating with each other in 1975, so you could **argue** that **was** the beginning of the internet.

9) Most internet traffic in 1976 **was** email, because academics **thought** electronic post-it notes **were** dead-core.

10) He **did** so by **inventing** an interface **using** HTTP, HTML, and URLs that **made** internet browsers possible.
